I am a Fullstack Developer with over 4 years of experience in developing web and mobile applications. With expertise in various frontend and backend technologies, I am capable of creating effective and efficient end-to-end solutions for diverse application needs.

My experience includes developing applications using **Golang, Python, Node.js, PHP (Laravel, CodeIgniter)** and **JavaScript** (including frameworks such as **Angular, and Vue.js**). I am also experienced in mobile application development using technologies like **React Native** and **Ionic**.

Experience

FEBUARY 2025 – PRESENT

IT Team Leader | PT. Jaga Aman Sejahtera | West Jakarta

- Leading the IT team in the development, implementation, and maintenance of production data input applications and production result dashboards for the nickel mining company.
- Designing and managing systems to handle real-time production data, ensuring the accuracy and integrity of the inputted data.
- Optimizing application performance to efficiently handle large data volumes and real-time transactions.
- Collaborating with the production team and management to ensure the applications meet operational needs and are effectively used by field teams.
- Ensuring seamless integration of applications with other company systems.
- Leading troubleshooting efforts and providing support and training to application users in the field.
- Ensuring the security of applications and data, including protection against cyber threats and performing regular data backup and recovery.
- Preparing reports and data analyses to support decision-making and operational planning.

JUNE 2022 – JANUARY 2025

Fullstack Developer | PT. Cipta Optima Manunggal | South Jakarta

- Designing, developing, and maintaining web-based applications to support the operations of the Indonesian National Police across all regions in Indonesia.
- Implementing features such as data management, reporting, monitoring systems, and integration between police systems.
- Creating and managing APIs to ensure seamless integration between systems.
- Optimizing application performance to handle large-scale operations, including millions of user data and real-time transactions.
- Ensuring application security meets government institutional standards, including data encryption and protection against cyber threats.
- Providing technical support to police personnel regarding the application's usage and ensuring it remains in optimal condition.
- Collaborating with other developers, analysts, and police representatives to ensure the application meets operational needs.

- Preparing technical documentation and user guides to facilitate training and application maintenance.

MARCH 2023 – SEPTEMBER 2023 (FREELANCE)

Fullstack Developer | PT. Berkat Sejati Transindo | Bekasi

- Developing and maintaining asset management applications to ensure company inventory data is well-organized.
- Enhancing maintenance application features to ensure asset maintenance processes are well-scheduled and documented.
- Managing and optimizing the payroll system to ensure accurate and timely employee salary disbursement.
- Integrating application systems with existing databases to support fast and accurate reporting.
- Ensuring applications deliver high performance, scalability, and security in compliance with company standards.
- Troubleshooting and resolving bugs or technical issues with in the applications.
- Collaborating with internal teams to understand business needs and implement appropriate technological solutions.
- Creating technical documentation for every system change or update.

NOVEMBER 2020 – JUNE 2022

IT Programmer | PT. Mulia Sawit Agro Lestari | South Jakarta

- Designing and developing asset management applications from scratch to ensure efficient and structured company inventory management.
- Building maintenance applications from the ground up to support systematically scheduled and documented asset maintenance processes.
- Developing and implementing ERP (Enterprise Resource Planning) applications from the ground up to support various operational functions of the company, such as resource management, logistics, and finance, while ensuring seamless integration between modules.
- Designing application architecture and databases to support scalability and the company's long-term needs.
- Optimizing application performance to handle large-scale data in real-time.
- Providing technical solutions and documentation to support the development, implementation, and user training of the applications.

Skills

- **Languages & Framework :**
 - Golang (Gin)
 - Python (Django)
 - JavaScript (Vue.js, Angular)
 - PHP (Laravel, Codeigniter)
 - Node.js (Express.js)
 - Mobile (React Native, Ionic)
- **DevOps & Tools :**
 - Docker & Docker Compose
 - GitLab CI/CD & Pipelines (multi-stage pipelines, artifacts, environment variables, SSH deployment, GitLab Runners)

- Version Control (Git)
 - Basic Monitoring & Debugging
- **System Administration :**
 - MySQL, PostgreSQL
- **IoT & Embedded System :**
 - Arduino Development (sensor handling, serial communication, basic electronics)
 - Familiar with microcontrollers (ESP8266, ESP32)

Education

OCTOBER 2020

Associate Degree in Computer Engineering | Politeknik Harapan Bersama | City. Tegal
